DEPARTMENT OF COMPUTER SCIENCE &
ENGINEERING**

CERTIFICATE

This is to certify that the mini project entitled, “**AEC SPORTS CLUB OFFICIAL WEBSITE DESIGN**”, which is being submitted here for the award of partial fulfilment of B.Tech degree is the result of the work completed by **Kaushal Maurya [2000010100027]** under my supervision and guidance within the institute and the same is the initiative taken by Institute / University for career growth of the student.

Mini Project Co-ordinator
MR. KAMLESH DESHMUKH
(Assistant professor)

ACKNOWLEDGEMENT

I take this opportunity to express a deep sense of gratitude towards my guide **MR KAMLESH DESHMUKH SIR**, for providing excellent guidance, encouragement and inspiration throughout the project. Over and above this, small queries on my part were constantly addressed and taken up by them with the cross functional team on a regular basis which helped all the members to see the mini project come through. I would also like to thank **MR. VINAY KUMAR SINGH [HEAD OF DEPARTMENT CSE]** for their valuable suggestions and helpful discussions.

Heartfelt gratitude deserves to be expressed towards **MR. KAMLESH DESHMUKH SIR** for constantly enriching the seminar and various systems in place at different levels, which allowed me to understand the context and scope of this seminar, as well as its importance.

I am also grateful to the friends at worked place that provided a completely stress-free working environment throughout the tenure of the seminar.

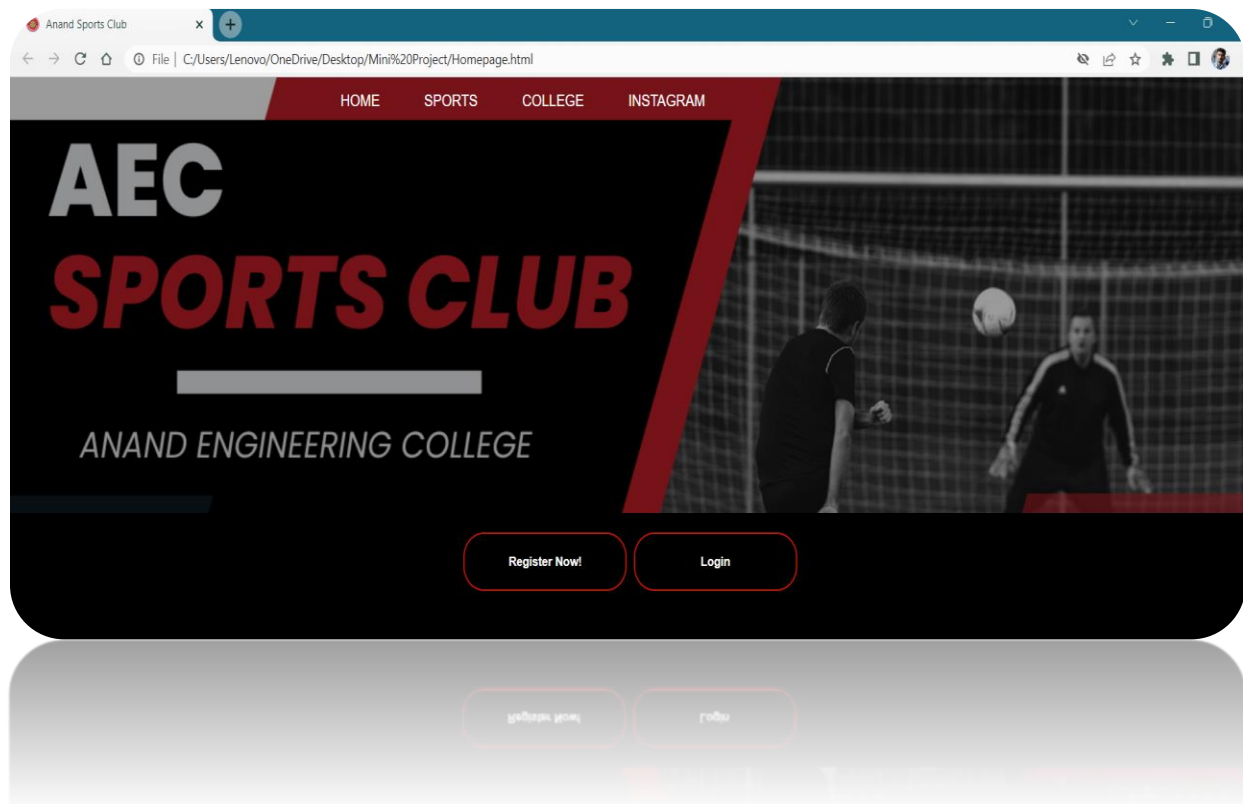

KAUSHAL MAURYA

[2000010100027]

B.Tech CSE 3rd Year

Introduction

The motive of designing **aec sports club official** webpage to show how easy it is to make a proper website. Now the times comes where Website design is very normal thing but this is only possible because of new automatic website generation techniques but without using this automation how can we design. Lets have a look of this website in the picture given below.

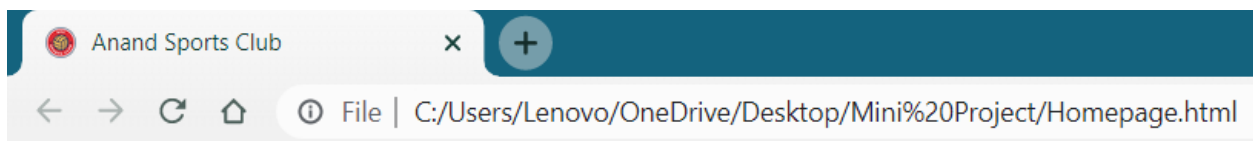

This website is design by HTML, CSS and JavaScript.
Let me show the features of this websites in few parts.

Literature Review

1. Favicon :-

A favicon image is displayed to the left of the page title in the browser tab, like this:

To add a favicon to your website, either save your favicon image to the root directory of your webserver, or create a folder in the root directory called images, and save your favicon image in this folder. A common name for a favicon image is "favicon.ico".

Next, add a `<link>` element to your "index.html" file, after the `<title>` element, like this:

2. Navigation Bar :-

Navigation bar is used to make thing easy for user to find their data
Designing a working navigation bar with the help of `<div>` tags
and `` `` tags.

The `<div>` tag defines a division or a section in an HTML document.

The `<div>` tag is used as a container for HTML elements - which is then styled with CSS or manipulated with JavaScript.

The `<div>` tag is easily styled by using the class or id attribute.

Any sort of content can be put inside the `<div>` tag!

The `` tag defines an unordered (bulleted) list.

Use the `` tag together with the `` tag to create unordered lists.

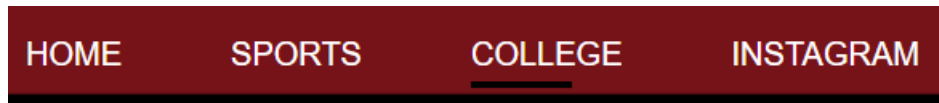

Every element of navigation bar contain a link to new webpage by using anchor tag. It is used to jump to other webpage.

Let me show it by clicking on college I am jump to aecagra.edu.in official website of our college.

In this navigation bar a animation technique is also given. By the use of **Hover** and **After** this effect has been possible when you put the cursor on the anchors .

In this image you can see college anchor there is an underline when I puted the cursor on it.

3. Banner :-

A Banner is used to give a best view of your website an make it easy to understand by user. Using a `<div>` tag and `` tag we can add a image in your webpage.

For example ``

4. Buttons :-

The buttons in html are used to do some particular task. Here we are attaching a link in both the buttons. For example if we press on register button it will go to a google form given in the fig and if we press login then the link goes to login page given in fig. <button> tag are used to create button in HTML.

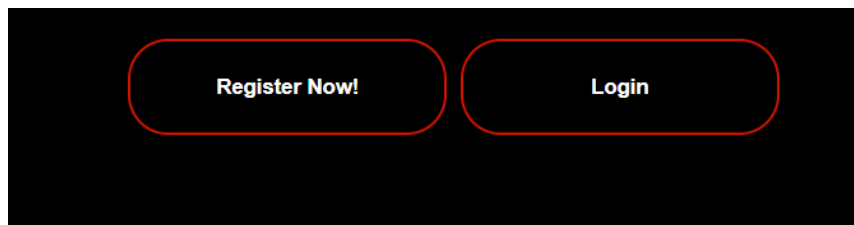

Fig 4.1

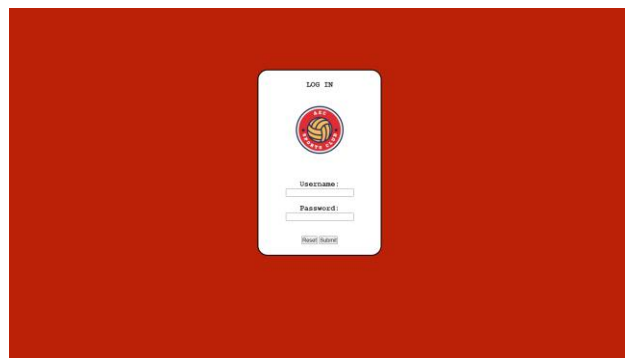

Fig 4.2

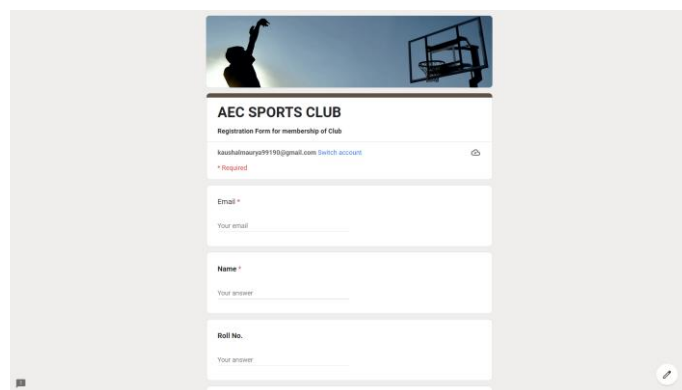

Fig 4.3

5. Image Gallery :-

Most of the image gallery are designed by using HTML and CSS.

Here we used CSS to maintain the look of the gallery.

Most of the role is done by padding and margin after that we used height and width.

6. Embed codes facility :-

I used embed code facilities given by many website using

<iframe> tag in html. For example youtube and instragram give his own embed code to add their features in your own website given in figures.

Fig 6.1

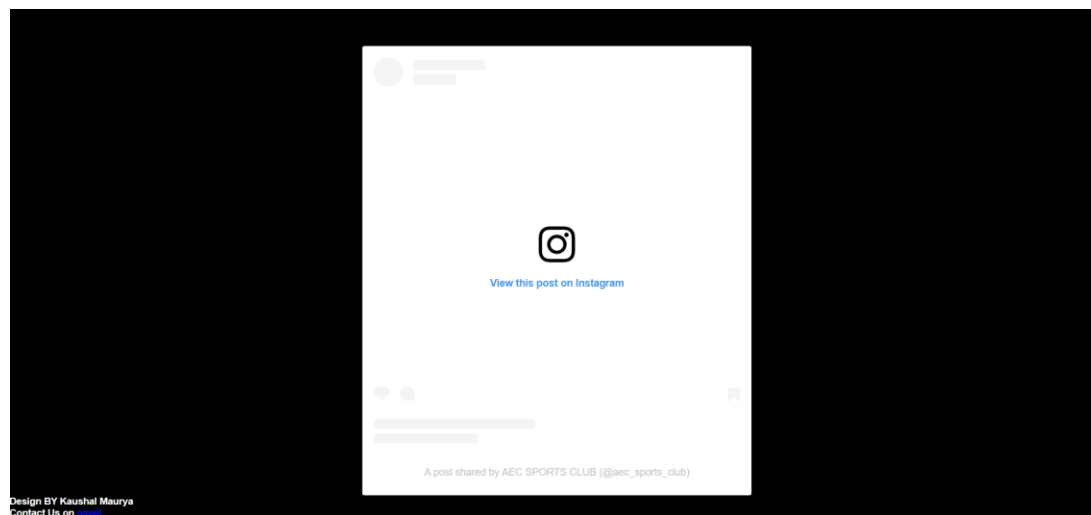

Fig 6.2

7. Mail to :-

It is quit easier to direct mail by clicking on text. It is done by <a> hyperlink tag. It reduce the time of mailing to someone and make it easier to visitor.
